

RECLAIM 100 PELLET-BURNING BOILER CLEAN BURNING, HIGH EFFICIENCY, BIOMASS-FIRED HEATING SYSTEM

The Reclaim boiler is a clean-burning, indoor, high-efficiency, biomass heating system. We have a North American version of this top-selling pellet boiler from Europe. It burns pelletized fuel made from wood, wood waste, agricultural waste, grass, or grains with output efficiency exceeding 90%. When replacing an oil or propane boiler, a Reclaim can save you 30-40% on winter heating bills.

Reclaim boilers are certified safe by Omni-Test Laboratories to UL and CSA standards for indoor use and burn virtually smoke free. In fact, the Reclaim 100 surpasses the Phase 2 particulate emissions standards established by EPA for outdoor wood boilers and is legal for sale in all 50 states.

The Reclaim boiler adds on to your existing hot water or forced air heating system to heat your entire house (not just one area like a wood or pellet stove), domestic hot water, garage, outbuilding, or swimming pool. You can even use it for your snow melt system.

Your Reclaim boiler will provide many years of low cost comfort and warmth, and since you'll be burning a renewable, carbon-neutral fuel, you'll be doing your part to combat climate change and wean us off of foreign oil.

EASY TO INSTALL - adds on to your existing heating system

SIMPLE TO USE AND MAINTAIN – electronic controls optimize operation and remove the guesswork

VARIABLE HEAT OUTPUT – electronic controls vary the heat output based on actual demand for heat. The boiler can operate as low as 20% of rated output on a mild day, and then automatically step up to maximum output when a winter storm blows in.

CERTIFIED SAFE – meets U.L. 391 and C.S.A. B366 standards of safety for indoor appliances

EFFICIENT – delivers more than 90% of the fuel's energy to the home heating system

ECONOMICAL - cuts winter heating bills by 20% or more

GREEN – carbon-neutral, locally sourced, renewable fuel means you're doing your part to support local jobs, fight climate change, and wean us off of foreign oil.

FEATURES OF THE RECLAIM 100 PELLET BURNER

PROVEN RELIABILITY

Introduced in 2001 in Europe, this boiler has thousands of satisfied users

COMPACT DIMENSIONS AND LOW WEIGHT

Fits easily in your basement, garage or other weather-protected enclosure

CONTEMPORARY LOOK AND FINISHES

The boiler will look great even after years of use

EASY OPERATION AND CLEANING

Electronic controls optimize combustion processes and take the guesswork out of operation and maintenance

LARGE FUEL STORAGE

The on-board pellet storage bin holds 2-3 days of fuel. With a bulk storage bin and augur, the boiler will operate for weeks or months without reloading (depending upon the weather)

CAST IRON CHAMBER

Ensures long boiler life, even when burning fuel at 2000°F

HIGH EFFICIENCY

Over 90% efficient

CERTIFIED SAFE

Omni-Test Laboratories has certified the Reclaim line meets U.S. (UL 391) and Canadian (CSA B366) standards of safety for indoor appliances

CERTIFIED LOW EMISSIONS

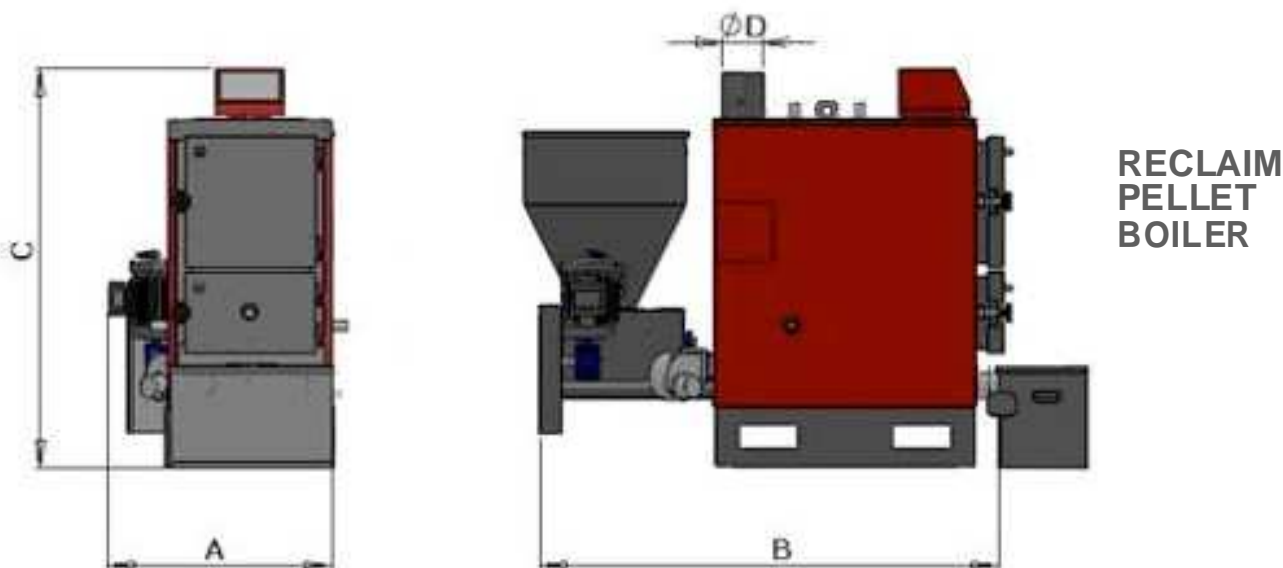

Omni-Test Laboratories certifies the product exceeds the performance standards established by EPA for outdoor wood boilers. The Reclaim is legal for sale in all 50 states.

AUTOMATIC ASH REMOVAL

High efficiency combustion means fewer ashes to clean out, but when you must, it's easy and you won't make a mess!

RELIABLE

5-year limited parts and labor warranty
